## CAREER OBJECTIVE

---

Data Scientist with 6 months of hands-on internship experience in building end-to-end machine learning models and data-driven solutions. Skilled in Python, SQL, Data Science, Machine Learning, Deep Learning, NLP, Generative AI, and Agent AI, with experience in developing intelligent systems and analytical dashboards. Strong foundation in statistics, feature engineering, and model evaluation, with the ability to translate data into actionable insights. Eager to contribute to solving real-world business problems using data and AI.

## PROFESSIONAL EXPERIENCE

---

### Data Science Intern — AIML LABS PVT LTD | January 2026 to Present

- Developed and deployed end-to-end machine learning models for real-world business use cases.
- Performed data cleaning, preprocessing, and transformation to prepare high-quality datasets.
- Conducted exploratory data analysis (EDA) to identify patterns, trends, and insights.
- Built and optimized classification, regression, and clustering models.
- Applied feature engineering techniques to improve model performance and interpretability.
- Evaluated models using appropriate metrics and ensured reliability and robustness.
- Designed and developed interactive dashboards using Power BI/Tableau for data visualization.
- Worked with large datasets using Python libraries like Pandas and NumPy.
- Implemented NLP techniques for text processing and analysis tasks.
- Built and experimented with Generative AI models for text-based solutions.
- Designed and developed Agent AI workflows using LLMs for task automation and decision-making.
- Integrated AI models into applications using APIs and modern frameworks.
- Collaborated with cross-functional teams to understand business requirements and deliver data-driven solutions.
- Maintained code quality and version control using Git and followed best development practices.

## TECHNICAL SKILLS

---

**Programming Languages:** Python, SQL

**Data Science & Machine Learning:** Regression, Classification, Clustering, Feature Engineering, Model Evaluation

**AI & Deep Learning:** Neural Networks, Deep Learning, NLP, Generative AI

**Agent AI & LLMs:** Prompt Engineering, LLM Applications, Agent Workflows, AI Automation

**Libraries & Frameworks:** Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy

**Data Visualization:** Matplotlib, Seaborn, Power BI, Tableau

**Data Handling:** Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA)

**Tools & Platforms:** Jupyter Notebook, Git, GitHub

**Databases:** MySQL

## PROJECTS

---

### 1) GenAI Retail Concierge (RAG + Agentic Automation)

**Technologies / Skills:** Python, FastAPI, OpenAI API, LangChain (Basic), LlamaIndex (Basic), FAISS (Basic), SQL, MLflow (Basic)

**Description:** Built a Generative AI-powered retail concierge to handle product queries, recommend alternatives, and automate post-purchase workflows (order status, returns eligibility). Implemented Retrieval-Augmented Generation (RAG) over product catalog, policies, and FAQs with grounding, citations, and guardrails to ensure response accuracy and safety.

#### Roles & Responsibilities:

- Designed ingestion and indexing pipelines with metadata enrichment to improve retrieval precision.
- Developed prompt templates and citation frameworks to minimize hallucinations.
- Built secure tool integrations for inventory lookup, pricing, ETA, and order management.

- Created offline evaluation datasets covering key retail intents and edge cases.
- Optimized latency and cost using caching, prompt compression, and intelligent model routing.
- Implemented observability (token tracking, tool traces) and production support runbooks.

## 2) Credit Card Default Risk Prediction

**Technologies / Skills:** Python, Pandas, NumPy, Scikit-learn, XGBoost, Seaborn, Classification Models, SMOTE, Model Evaluation

**Description:** Built a predictive model to identify potential credit card defaulters using customer financial data, helping in risk assessment and decision-making for financial institutions.

**Roles & Responsibilities:**

- Processed and cleaned large-scale financial datasets.
- Performed exploratory data analysis to understand customer behavior.
- Addressed class imbalance using resampling techniques (SMOTE).
- Built and compared classification models including Logistic Regression, Random Forest, and XGBoost.
- Tuned model parameters to improve performance and evaluated using classification metrics.
- Derived actionable insights and visualized key factors influencing customer defaults.

## EDUCATION

---

**B.Tech — KLE Technological University** | 2022 – 2026

*Hubli, Karnataka*

## CERTIFICATIONS

---

**Cloud Computing — NPTEL (IIT Kharagpur)** | 2025

*Issued by IIT Kharagpur via NPTEL*
